

**Aging Research
and Practices
in Malaysia**

Frontiers in
Public Health

Research in ageing involves inter-disciplinary collaboration that traditionally vary in their measures, methodologies and processes. This Research Topic invites articles on the following topics:

- Management of measurements, monitoring and understanding for a wide range of issues and challenges related to ageing;
- Studies on behavior, environment, health promotion, healthcare, health economy and policy impact;
- Research methods within the social science disciplines of sociology and social psychology which enrich the understanding of ageing and illness;
- Use and impact of technology and age-friendly environments for aged care;
- Study on diverse populations (e.g., across the life-course) and settings (e.g., global health, schools, communities).

The primary aim is to enhance understanding about ageing in Malaysia: research and practice.
